Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: This case is currently under a non-final rejection. Mr. Dorton scheduled the interview to discuss the current listing of claims with respect to the prior art (see above) of record. Mr. Dorton reiterated the clients position that they felt that the prior art of Batten is not functionally capable of having the collet member clamped to the shank member without rotating said collet member. Mr. Dorton states that such a function would destroy the reference of Batten, and therefore is not anticipated by the prior art of Batten. The examiner disagreed, but stated that he would take the issue at hand to the primary of record (Flemming Saether) and get back to Mr. Dorton next week with the primary's viewpoint on said issue. In addition, the examiner suggested that the applicant focus on further claiming how the rib and valleys of the collet and compression member, respectively, have corresponding shapes and when in the released position fit within one another. Examiner stated that he would consider all amendments and remarks regarding the case in the official response to the most recent office action.
